GUIDE

THERE'S A
SCIENCE TO
BREEDING
CONFIDENCE.

WHERE PROVEN SCIENCE MEETS PERFORMANCE.

At Betaseed, we're using advances in science to optimize the potential of every seed you plant. Our state-of-the-art breeding and testing process takes up to ten years. It's the only way to ensure the hybrid your Betaseed rep recommends has the best traits to manage disease and drive yields on your farm.

THE RIGHT TREATMENTS

Our sugarbeet seeds are specially treated to give them an extra layer of protection from seedling pests and diseases. In addition, the right treatment provides a wider window of opportunity for pesticide applications. Betaseed offers you unique solutions tailored specifically for your region.

AMALGAMATED REGION SEED TREATMENTS

**BetaShield®
COMPLETE**

Allegiance, Thiram
Tachigaren 20g,
Poncho, Vibrance

A DECADE OF R & D IS BEHIND EVERY SEED YOU PLANT.

YEARS 1-3

**BREEDING
BEGINS**

HAND CROSS

Development of a parent with genetics for increased productivity.

SELFINGS

The first step in seed multiplication.

PARTITIONS

Production of test hybrids for early-generation decisions.

YEARS 4-6

**TESTING
SELECTION**

EXPERIMENTAL HYBRIDS

Production of potential candidates for official variety trials (OVT).

YEAR 7

**SEED
PRODUCTION**

PRE-BASIC

A genetically pure increase of selected parent/breeder seed.

BASIC SEED

Seed planted to grow parents for commercial varieties.

COMMERCIAL SEED

Seed grown, processed and OVT tested to meet customer demand.

YEAR 8-10

**FINAL
TESTING &
DELIVERY**

SEED DELIVERY

You plant the right variety for your farm with confidence.

VARIETIES FOR 2026

The hybrids in this guide were developed with research-driven solutions combined with our local breeding expertise to produce the industry's highest performing, most consistent seeds. Each variety was painstakingly researched, bred and tested over multiple seasons to make sure it has what it takes to thrive on your farm.
