**Breeding Confidence**

**Dear MDFC Growers,**

This year's Seed Guide is out to growers earlier than ever before – and you may be asking why.

Well, the 2022 seed crop in Oregon has been harvested and its underway with various processes and rigorous quality tests for delivery of seed in the spring of 2023.

Betaseed is committed to growers across the country and production decisions are typically based on the previous year's results in the OVT's. So, whether there is a variety that has been around and "proven" or if a variety only has 1 year or 2 years of testing, rest assured, Betaseed is covering your seed needs.

We are excited to add 3 new CR+™ trait varieties to our line up (Pending Test Market Approval), as well as offering two CR+ trait varieties that will have 3 years of testing. The 2023 portfolio will also include 1 non-CR+ trait variety which is Fully Approved.

As we eagerly wait for new data from this year OVT's, we can look back at last year's data (which triggered production plans for Betaseed's portfolio in 2023) and start planning for next year.

Wishing you a successful year.

Regards,

**Cody Lehman**  
Key Account Manager
